Preface.....	ix
1 The basics	1
1.1 Catalytic concepts	1
1.1.1 Definitions	1
1.1.2 Length and time scales in catalysis.....	5
1.1.3 Catalytic trinity: activity, selectivity, stability.....	6
1.1.4 Composition of catalysts	11
1.2 Reactivity of solids.....	14
1.2.1 Physisorption and chemisorption	16
1.2.2 Basics of chemisorption theory	17
1.2.3 Surface crystallography	18
1.2.4 Mechanisms of some catalytic reactions	22
1.3 Catalysis in industry.....	26
References	34
2 Engineering catalysts.....	37
2.1 Catalyst design	37
2.1.1 Being in shape	38
2.1.2 Scaling of catalysts.....	43
2.2 Toolbox in catalysis	44
2.2.1 General overview of the characterization methods.....	44
2.2.2 Adsorption methods.....	46
2.2.3 Physisorption methods	47
2.2.4 Chemisorption	56
2.2.5 Temperature-programmed methods.....	59
2.2.6 Calorimetry.....	63
2.2.7 X-ray diffraction	64
2.2.8 X-ray photoelectron spectroscopy and X-ray fluorescence....	65
2.2.9 Infrared and Raman spectroscopies.....	68
2.2.10 Catalyst particle size measurements	73
2.2.11 Electron paramagnetic/spin resonance	73
2.2.12 Mössbauer spectroscopy	75
2.2.13 X-ray absorption spectroscopy	77
2.2.14 Nuclear magnetic resonance.....	78
2.2.15 Imaging of catalysts.....	80
2.2.16 Catalytic reactions: product analysis	87
2.2.17 Theory as a part of a toolbox.....	91
2.3 Preparation of catalytic materials.....	94
2.3.1 General overview	94
2.3.2 Unsupported metals.....	103

2.3.3	Preparation of bulk oxides by precipitation	106
2.3.4	Heteropolyacids.....	111
2.3.5	Catalysts supports	112
2.3.6	Supported catalysts	138
2.3.7	Catalyst forming operations.....	154
	References.....	162
3	Engineering reactions.....	165
3.1	Introduction.....	165
3.2	Thermodynamics	165
3.3	Kinetics	167
3.3.1	Definitions	167
3.3.2	Reaction mechanism.....	169
3.3.3	Kinetics of complex reactions	177
3.3.4	Relationship between thermodynamics and kinetics	185
3.3.5	Non-ideal surfaces	185
3.4	Kinetic aspects of selectivity	188
3.4.1	Structure sensitivity	192
3.4.2	Mechanism-free kinetics – kinetic polynomial	194
3.4.3	What is behind a rate constant?	194
3.4.4	Dynamic catalysis	197
3.4.5	Deactivation	197
3.4.6	Mathematical treatment of experimental data	202
3.5	Mass transfer.....	207
3.5.1	Diffusion effects in heterogeneous catalysis	207
3.5.2	Reactor dependent external diffusion (interphase mass transfer, film diffusion)	208
3.5.3	Calculation of diffusion coefficients	216
3.5.4	Size dependent internal (pore) diffusion	219
3.5.5	Non-isothermal conditions.....	225
3.5.6	Multiple reactions and diffusional limitations.....	228
3.5.7	Diffusion in micropores	231
3.5.8	Criteria for the absence of diffusional limitations.....	232
3.6	Catalytic reactors.....	236
3.6.1	Laboratory reactors	236
3.6.2	Industrial reactors	242
3.6.3	Two-phase reactors	242
3.6.4	Three-phase catalytic reactors.....	248
3.6.5	Reactor modeling.....	258
3.6.6	Catalyst handling in a plant.....	267
	References.....	274
4	Engineering technology.....	277
4.1	General structures of chemical processes.....	277
4.1.1	Safety in design.....	279
4.1.2	Conceptual process design: examples	280
4.1.3	Conceptual process design: general comments	286
4.1.4	Reactor selection	288

4.2	(Petro)chemical industry	302
4.3	Fluid catalytic cracking.....	302
4.3.1	Feedstock.....	303
4.3.2	Reactions/mechanism	304
4.3.3	Kinetics/process variables	308
4.3.4	Catalysts	310
4.3.5	Technology	312
4.4	Steam reforming of natural gas.....	316
4.4.1	General.....	316
4.4.2	Process conditions for sulfur removal and primary reforming	319
4.4.3	Kinetics and mechanism	320
4.4.4	Technology	323
4.4.5	Catalysts	325
4.5	Ammonia synthesis.....	328
4.5.1	General.....	328
4.5.2	Thermodynamics	329
4.5.3	Kinetics.....	330
4.5.4	Catalysts	333
4.5.5	Reactors and process design	337
4.6	Phthalic anhydride synthesis.....	340
4.6.1	Feedstock.....	340
4.6.2	Thermodynamics	341
4.6.3	Mechanism	343
4.6.4	Catalyst.....	344
4.6.5	Kinetics.....	346
4.6.6	Technology, reaction and separation	346
	References.....	350
	Acknowledgement	353
	Recommended reading	355
	Index.....	359
