<i>About the authors</i>	<i>x</i>
<i>Foreword</i>	<i>xiii</i>
<i>Preface</i>	<i>xv</i>
<i>Acknowledgements</i>	<i>xvii</i>
1 Current concepts in work safety and health	1
Modern trends	1
Safety, health and risk	4
Key factors in the development of workplace accident prevention	8
Accident costs from workplace injuries and damage	21
Issues in the work environment affecting employee well-being	30
Further reading	36
Activities	37
2 Safety management	38
Safety and health in risk management	38
Formal and informal safety meetings	47
Nature, occurrence and industrial relations implications of OHS issues	52
Prioritizing and developing strategies to resolve OHS issues	56
Budget planning, control of safety expenditure and supervision	62
Best practice in work safety	71
Contractor safety	74
Behaviour-based safety	76
Communication and meeting skills	78
Further reading	93
Activities	94
3 Common and statute law	95
Origins and types of law which influence occupational health and safety	95
Duty of care	100
Occupational health and safety legislation	102
Legislation in accident prevention in the USA and European Union	114

Further reading	118
Activities	119
Appendix 3.1 – A brief guide to some OHS legislation and organizations (to November 2003)	120
4 Hazard and risk management	130
Risk concepts	130
Role of hazards in injury causation	132
Planned hazard identification, formal and informal systems	133
Risk assessment	139
Principles behind risk assessment, and importance and limitations of scientific assessment	144
Understanding risk	151
Risk control	155
Selecting and using personal protective equipment	157
Communicating risk	159
Further reading	161
Activities	162
Appendix 4.1 – Assessing risk with figures: Summary of US Navy risk assessment paper by Kinney and Wiruth	163
5 Workplace inspections	168
Standard setting and formal and informal inspections	168
Structured and documented inspections	174
Format for inspections and reporting	178
Conducting a safety audit and preparing a report	185
Further reading	190
Activities	190
6 Accident prevention	191
Accident causation factors	192
Accident investigation	201
Principal elements in developing a workplace health and safety plan	217
Accident, injury, compensation and safety data	227
Collecting, sorting, accessing and validating data	227
Data handling and analysis	229
Data reporting to management	234
Violence in the workplace	235
Further reading	238
Activities	239
Appendix 6.1 – Accident models	239
7 Risk engineering	246
Risk and reliability	246
Systems engineering	250

Electrical safety	254
Fixed machinery hazards	259
Safe use of pressure vessels and lifting equipment	264
Fire hazard identification and extinguisher use	272
Fire safety managers	280
Building regulations and fire safety compliance	280
Determining building classifications, fire load and fire resistance	285
Preparing a technical brief of fire safety requirements for a building	286
The human element in fire causation and behaviour during fire emergencies	289
Locking systems – security versus safe egress	291
Fire prevention and emergency training programmes	292
Further reading	297
Activities	298
8 Health at work	299
Development history of occupational health	299
Current developments in occupational health	301
Workplace stressors, processes, diseases and disabilities	303
Links between workplace stressors, processes and diseases	307
Worker health monitoring	324
Stressors inside and outside the workplace	326
Alcohol and drugs in the workplace	336
Workplace wellness	338
Further reading	342
Activities	344
9 Hazardous substance management	346
Chemical elements, compounds, classes and physical state	346
Common chemical hazard classes and descriptors	351
Chemical reactions and structures	355
Classifying chemicals	359
Main factors in transport of hazardous chemicals	363
Dangerous goods vehicle and driver checks	367
Storage of hazardous substances	368
Information sources on chemical hazards	370
Procedures for receipt and dispatch of hazardous substances	376
Specialist facilities for the management of hazardous substances	382
Signage required for storage, handling and transport of hazardous substances, including dangerous goods	385
Controls to minimize employee exposure	386
Role of emergency personnel	390
Useful information on toxicity and confined spaces	392
Further reading	393
Activities	394

Appendix 9.1 – European Union and US material safety data sheet requirements	395
10 Work environment	399
Major characteristics of noise	399
Control of excessive noise	402
Ergonomic principles and control of noise, vibration and lighting hazards	404
Conducting a noise survey	405
Measuring light levels	410
Air contaminant measurement	414
Evaluation, exposure controls and reporting on chemical contaminant monitoring	429
Thermal comfort and heat stress	433
Vibration	438
Non-ionizing radiation	439
Ionizing radiation	442
Further reading	446
Activities	448
11 Ergonomics	449
Origins and history	449
The person-machine model	452
Anthropometry	454
Relative merits of methods of collecting and applying anthropometric data	455
Common forms of occupational overuse syndrome (OOS) and preventative ergonomic strategies	458
Methods for identification, assessment and control of manual handling hazards	462
Assessment of manual handling tasks	466
Prevention of manual handling injuries	468
Assessing the energy cost of work	472
Ergonomic principles associated with integration of controls and displays	475
Job design structure	477
Ergonomic principles and design and redesign of work stations	480
Human error	484
Further reading	485
Activities	487
12 Workers' compensation and rehabilitation	489
Development of employer's liability	489
Employer's liability for compensation under workers' compensation legislation	492
Process for resolving disputes in workers' compensation	493
Principles of rehabilitation applying to injured workers	495

Role of rehabilitation in the workers' compensation system	498
Factors in an effective injury management system	499
Assistance in rehabilitation of employees	502
Negotiation of premium level with the insurer	503
Effective claims management	504
Further reading	507
Activities	508
13 Health and safety training	509
Health and safety training programmes	509
Training needs analysis, and design, conduct and evaluation of an OHS training programme	513
Assessment methods	520
Options for training delivery	523
Evaluating a training session or programme	523
The importance of procedures	524
Further reading	531
Activities	533
Appendix 13.1 – OHS competencies and performance criteria for key workplace parties	534
14 Health and safety management systems	542
Options for management of OHS in an organization	542
Strategies to integrate OHS into organizational quality management systems	551
Proposing and defending a strategy for management of change	558
Reviewing an occupational health and safety management system	568
Cost–benefit analysis for new acquisitions, refurbishments or maintenance	571
Planning integration of the new risk management strategy with the organization's quality management (QM) programme	575
Further reading	578
Activities	580
Information sources	581
Some worldwide web addresses on OHS	581
<i>Index</i>	585
